

nVisium Case Study: **Bluescape**

The Problem

Bluescape developed a new global architecture for their next generation collaboration platform. One of their critical needs was an effective architecture and controls validation review to identify design flaws that could potentially expose the platform and its infrastructure technology stack to insecure configuration in an operational environment.

The Solution

Bluescape engaged nVisium to provide skilled security engineering resources to conduct the validation review of the new global architecture. nVisium not only validated the strength of the established engineering practices and conducted a thorough validation of the architecture within a short period, but also identified and proposed actionable remedial guidance for observed gaps in technology, configuration and processes. The nVisium team collaborated with Bluescape's CISO, CTO and DevOps leaders efficiently to deliver a comprehensive engagement and final summary readout that was well received by Bluescape's executive constituents on time, cost-effectively, and in-line with a growing company's budget expectations.

BLUESCAPE

ABOUT BLUESCAPE

Bluescape creates collaboration solutions that help distributed teams perform their best—at work, on the go, and at home. Its virtual work platform empowers colleagues to see the big picture, make better decisions, and drive positive results. Customers include Fortune 100 companies, government agencies, higher education, and leaders in media and entertainment. Within the COVID-19 pandemic and the uptick in remote working, Bluescape is the next best thing to being in the same room. The platform enables teams to get more done, more efficiently, going far beyond the average collaboration tool.

ABOUT NVISIUM

nVisium empowers organizations to eliminate security vulnerabilities through proven in-depth assessments, remediation, and training programs. Our experienced team of security-savvy engineers help organizations establish best practices with high ROI for their engineering and development lifecycles. Through services, software solutions, and R&D, nVisium provides security support for applications, operating systems, networks, mobile, cloud, and IoT unique to business operations, compliance initiatives, and more. Additionally, nVisium offers instructor-led and online security training. Privately owned and founded in 2009, nVisium is headquartered in Falls Church, Virginia, and names global Fortune 500 companies and household brands as
